Gold Wind Engineering (S) Pte Ltd Sky Lift System for Warehousing

Title: **Sky Lift Storage for For Warehousing.**

Project Design Team : **EDWARD ONG / TONG BOON YIK**

Date: **07 May 2018**

DESIGN FEATURE

Deck Height	: 3016mm FFL
Function	: Less Manpower design
Load Capacity	: Max 800 kgs
Power	: 380V
Controlling system	: Remote system
Structure	: Metal Steel

ENGINEERING OF STORAGE SOLUTIONS

About Us

Gold Wind Engineering (S) Pte Ltd was established in 2011. We provide that delivers material handling products and services to our clients throughout Singapore. Primarily focussing on all kind of storage racking and Warehouse safety inspections, you will find that our services of your storage equipment to a standard.

We specialize in the design, fabrication, installation of storage racking systems. Our company has also started expanding with more professional installation team. This is just the beginning, we are on our way to becoming a first level professional producer of storage logistics equipment in Singapore.

Our Vision

To provide excellent customer service and become the preferred choice of the supplier

Our Mission

The enhancement of safety standards throughout the pallet racking industry. Where there are costs we will find reductions, problems, we shall seek solutions, confusion bring clarity and doubt we shall bring understanding

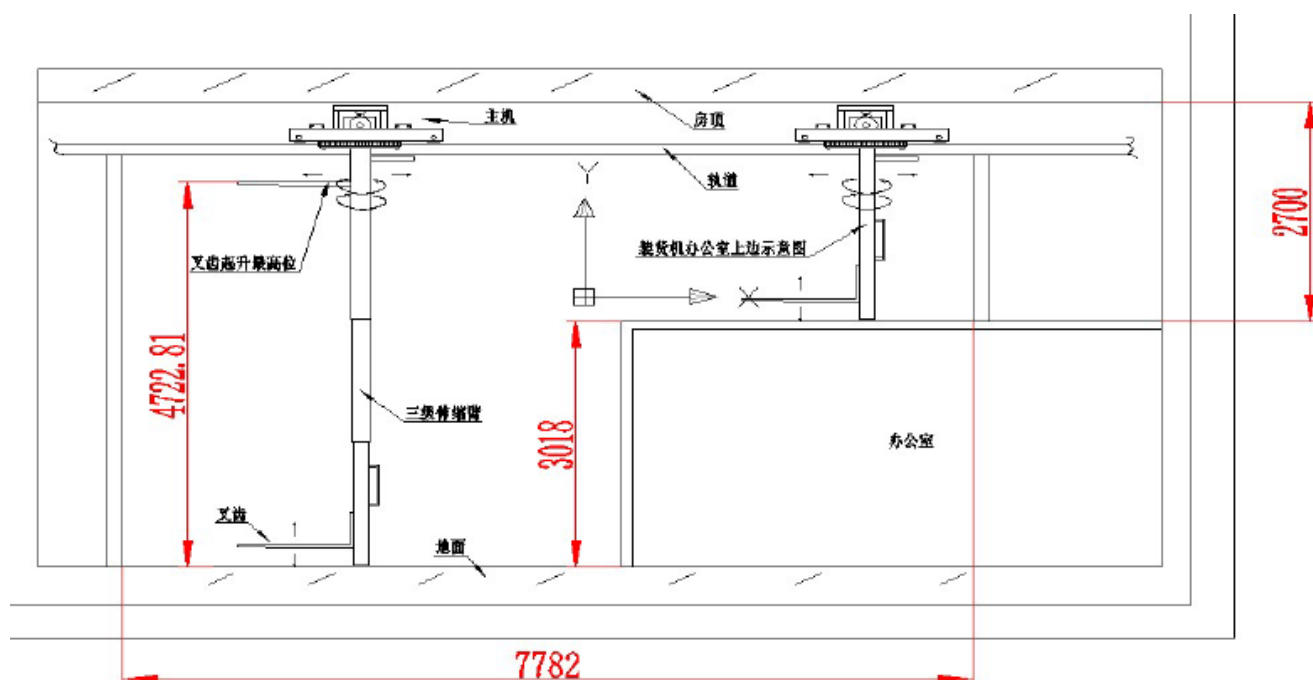

Why Choose Gold Wind Engineering?

We believe experience is just as important as knowledge. We possess both knowledge and practical experience to provide excellent services to our client.

- High Trained Gold Wind Installation Team
- In-house safety practise weekly.
- Designed & built experience more than 18 Years.
- Ex- Stock in Singapore & Malaysia
- Re-Design our client current racking to new warehouse
- Quickly Sales Response to client.

////////// EPOXY POWDER COATING

What Is Powder Coating?

Powder coating is the process of applying a dry powdered paint compound made of pigments, specialized resins and fillers that melt and fuse together during the curing process to form a painted finish. The solid powder particles are electrostatically charged when exiting the low-velocity air powered spray gun. This electrostatic charge attracts paint particles to the work surface and holds them during the high temperature curing process which can exceed 350 degrees.

Why Is It Environmentally Friendly?

Powder coating is recognized as an environmentally friendly process because it doesn't rely on solvents or chemical carriers like traditional wet-paint systems. Because powder coating relies on the electrostatic charge to hold the paint to the work piece, powder coating eliminates VOC emission problems.

How Durable Is It?

Powder coatings are very resistant to cracking and peeling and provide very high abrasion, corrosion and chemical resistance. These attributes vary according to the specific application and paint choice. Powder coatings typically meet or exceed the finish performance characteristics of conventional solvent based wet paint coatings
